Full Stack Developer

A skilled PHP full stack Software Developer with 4+ years of experience in designing, developing, and deploying scalable web applications. Seeking to leverage expertise in full stack development and proficiency with Laravel, PHP, and front-end technologies to contribute effectively to a dynamic product development team. I'm Looking for full stack developer or full stack engineer role.

Intiveo *May 2021-present*

- Use Laravel and other edge-cutting technologies to handle client-patient communication software to increase ARR by 2% quarterly.
- Iterated platform for Dental software, collaborating with other engineers to create features across the software using Slack, Confluence, Git, Jira, Docker, and CI/CD.
- Worked with product managers to solve pre-existing bugs, operating speed, and documenting processes to increase efficiency by 10%
- Reviewed pre-built code and conducted pair programming to re-architect the system keeping existing features as it led user flow to increased by 12%.
- Gathered user requirements, and built and maintained code for the tool raising the revenue by 20%.

PHP Developer

Mobio solutions *June 2017-Feb 2019*

- Coordinate with the team to design scalable applications for clients, via requirement analysis, and planning for 10+ projects.
- WordPress theme creation, customization, and Integration with Laravel backend to store data.
- Created 2+ applications as per client requirements using various frontend, backend, and e-commerce such as Shopify leading to 3+ client retention.
- Developed REST APIs to deliver location, reporting, and real-time push notifications for a tracking app eTrackly using Kanban.
- Built a platform for ProbTP to train their enterprise users via media and text content to handle 1M+ users.
- Partnered with 10+ developers, 3 testers, and project managers to finish the scheduled task as per the scrum board for Cactus Communication.
- Participated with other devs to create SPA for the system in VueJs for smooth onboarding of the end-user into the system.

Education

Confederation College

ICT Solutions for Small Businesses
2019-2021, Thunder bay

Gujarat Technological University

Bachelor of engineering
2013-2017, Gujarat, India

Certificates

- Ultimate Java Part 1: Fundamentals
- Ultimate Java Part 2: Object-oriented Programming
- JavaScript Essential Training

Projects

Intiveo

- Engineered a chat app within the platform, leveraging Laravel, Pusher, PHP, React, Twilio, Typescript, and HTML/CSS; empowered clients to effortlessly connect with their patients, leading to a 25% reduction in appointment cancellations and a 15% boost in overall patient engagement.
- Developed and launched a robust form creation and storage platform on a server, collaborating with a team of 7 engineers; implemented automated email, text, and voice reminders, resulting in a 40% increase in form completion rates within 3 months.
- Iterated internal tool using React and Laravel to generate and monitor reports at the enterprise level, which improved CTR by 3%
- Designed and delivered a referral management system to enable 10% smoother referral process for both the sending and receiving practices.
- Partnered with a developer to implement RESTful APIs in React with complex component using storybook, enabling the Customer Experience team to increase reporting speed by 24%
- Built RESTful APIs that served data to the React front-end based on chosen user inputs that handled over 500,000 concurrent clinic users.
- Perform tasks to create/enhance communication system via email/text to send reminders using Pusher, Twilio, and S3 to increase the likelihood of customer conversion by 10% (~$80,000 in new monthly revenue).

Cactus Communication

- Created REST APIs to deliver data for the front-end in Angular by collaborating front-end team.
- Enhanced a platform to calculate pricing based on selected services for the Journals, Publishers, & Societies with the existing data.
- Used Laravel's OOP to generate a distributed codebase with multiple DB and repository patterns.

PROBTP

- Created a learning management platform where a trainer can upload content like, video, images, question etc to train other people in organization.
- Authentication system for enterprise level users with distinct roles and permissions.
- Maintenance and bug-fixing after deployment and helped client to receive feedback from their trainee on each content.
